Code challenge

Implement an HTTP server that accepts a GET request with the parameter *user_id*. The server contains two databases, one for *users* and one for *users_colors*. For the user_id you receive as parameters, return an object containing that users name and their favorite colors.

Input into GET request:

user_id: 9943588

Output from server:

body: {

    name: Ashley,

    colors: ['Green', 'Yellow']

}

users - table of users in the system

ID	Name
3234234	Frank
1145145	Jenn
9943588	Ashley

users_colors - table mapping users to their favorite colors

User ID	Color
3234234	Red
3234234	Blue
3234234	Green
1145145	Yellow
9943588	Green
9943588	Yellow
